

INFORMATION SHARING POLICY

I. Purpose

This policy is to document the James A. Weidman, A Medical Corporation (Practice) policies and procedures for sharing information with patients in a safe, secure and HIPAA compliant manner.

II. Manner

All information shared with patients and authorized representatives will be done so in a manner which is HIPAA compliant and in keeping with state and jurisdictional regulations regarding privacy, confidentiality and information sharing.

III. Goal

The goal of the Practice is to make every effort to share information with patients and authorized representatives in order to empower them to be active participants in their care. Sharing of information will be accomplished through both active (upon request) and passive (information that is made available without explicit request) methods as outlined below.

IV. Active sharing of information

The Practice makes every effort to honor requests from patients and authorized representatives to provide information to requestors in a timely manner and a format that is consistent with the request.

A. Requests

Requests from patients can be made to the practice via the following identified methods:

1. Phone – 818-713-9377
2. Website – info@westhillspediatrics.com
3. Portal message – If you don't have access to the Portal, please call the office and ask for login information to the Portal.
4. Fax – 818-713-1924
5. In writing – 7325 Medical Center Drive, Suite 205, West Hills, Ca 91307

B. Format

The Practice agrees to provide information in the following formats where possible:

1. Paper records (for mail or in office pick-up)
2. Faxed records
3. PDFs/Images/Documents provided on external hard drive with appropriate encryption
4. Electronic information that is available electronically via a CDA provided by any of the following methods:
 1. Via facilitation through a patient portal
 2. Via routine practice email. This is a secure email.

C. Processing requests

All requests for information will be documented in the medical record within 3 business days of the request.

Every effort will be made to process requests within 3 business days in order to provide patients with timely access to their information. If the practice is unable to meet the 3 day practice goal, the practice staff will communicate an anticipated delay with the requester and make alternative arrangements to provide information (either in content or format) as mutually agreed upon. The practice will monitor their performance to ensure they are meeting this goal at least 90% of the time and institute improvement processes as deemed appropriate.

D. Cooperation and collaboration

If the Practice is unable to provide the requested information in the manner and format requested, alternative arrangements will be sought to satisfy the requester. Documentation will be made in the medical record related to communication to offer alternatives and document resolutions. Any information that cannot be shared will be documented as to the content, the reason it could not be shared as requested, and will reference the appropriate exceptions according to the 21st Century Cures Act.

V. Passive Sharing of Information:

The Practice makes every effort to provide access to patient information via a patient portal hosted by a third party vendor.

1. Encouraging portal adoption

The practice encourages use of the patient portal for all patients from the time of new patient registration and through individual invitation and bulk messaging explaining the value of having access to clinical health information at all times.

2. Proactive sharing information through the portal

The practice shares appropriate information freely through our EHR and Patient Portal technology wherever safe, appropriate and feasible via our technology partners.

A. Timely processing of requests Each request must include the following:

1. Name and role of the requester (if not the patient)
2. Time/date of the request
3. Verification of the legal authority of the requester to have access to the information where uncertain/unclear
4. Written confirmation of request where feasible to document authority (may be signed information request form, portal message which required authentication to initiate, faxed or emailed documentation)
5. Content and Format in which the requester is asking for the information to be provided

B. Electronic Personal Health Information (EHI) currently available for patients or their authorized representatives in electronic format includes the following:

1. Demographics
2. Problem List
3. Allergies
4. Medications
5. Vital Signs
6. Visit Notes including Assessment and Plan
7. Procedures
8. Immunizations
9. Diagnostic Test Results

C. Smoking Status – excluded

D. Care Team Member – Dr. James A. Weidman MD

E. The above EHI is available through both the patient portal and through self-generated documents which patients (or their representatives) can access freely through the portal and download or send via secure email directly from the patient.

VI. Ability to Receive EHI

Our Practice makes every effort to receive patient information in an electronic format in order to empower patients to share EHI with our practice team to facilitate care delivery and the ability to reshare information electronically. However, do date, none of the hospitals, urgent care centers, external healthcare entities or facilities or labs are able to send information electronically. Information generated by the hospital, external healthcare provider or facilities must be obtained directly from the hospital.

VII. Gaps in Practice Information Sharing

Our Practice makes every effort to share information in accordance with HIPAA, state and jurisdictional laws wherever possible. The following are identified gaps in information sharing and our practice plan to address these gaps. The practice is committed to empowering patients with their health information and will work to continually identify and address gaps as they become known to us.

A. Information stored in non-electronic format

The Practice has information stored as images and/or PDFs in our EHR as part of patient charts (including prior records, specialty reports from external sources). Since this information is not stored in an electronic format, it cannot be shared or transmitted in an electronic format. Patient requests for information which exist in these formats will be shared with patients in a mutually agreeable format as requested.

B. Sensitive data

1. Pediatric charts can include sensitive information that is not directly patient data, such as health data specific to the maternal health history. In an effort to protect the maternal privacy in accordance with HIPAA, this information will not routinely be shared with others who may also have access to the information through a child's medical records. As it is currently infeasible to redact the maternal history from the child's medical records, some records may be protected. If this information is requested, the practice will document the request, attempt to reach a mutually agreeable solution with the requester and document the exception for sharing of information in accordance with the Information Blocking Provisions of the 21st Century Cures Act. If the mother is not willing to share her maternal history, then the requester will not have access electronically to the information.
2. Other sensitive information regarding the health and well-being of children and adolescents that is shared in confidence (including but not limited to, suspected child abuse, gender identity, substance use/abuse) may be restricted from passive sharing due to provider concerns about harm to the patient or the infeasibility of being able to redact sensitive information as required by jurisdiction or HIPAA. If this specific information is requested, the Practice will document the request, attempt to reach a mutually agreeable solution with the requester and document the exception for sharing of information in accordance with the Information Blocking Provisions of the 21st Century Cures Act

C. Direct Messaging

All providers in the practice share one secure email address as follows: Email - info@westhillspediatrics.com

VIII. Non-discriminatory Decisions to Withhold Information

The Practice does not make decisions to withhold information lightly. All decisions to withhold information will be done in accordance with the 21st Century Cures Act exceptions and in a non-discriminatory manner. The practice policy gaps in information sharing are outlined as above. In all instances, withholding of information will conform to this organizational policy or will be documented by a provider on a case-by-case basis.

Every effort will be made by the practice to review and update this policy annually.

Policy Approved Date: March 10, 2021
